

Local Service Bookings App - Development Plan

1. Overview

The app is a hyperlocal platform allowing small service providers (e.g., turf owners, gamezone owners) to list their services, time slots, and availability. Users can browse, book, and manage services locally via a mobile app.

2. Core Features

Customer Side:

- Browse services by category and location
- View availability calendar and book time slots
- View/manage upcoming bookings
- Leave reviews and ratings

Vendor Side:

- Register business and list services
- Create and manage time slots
- Accept/reject bookings
- View booking history and customer details

Admin (Optional for V1):

- Approve vendors
- Monitor activity and resolve disputes

3. MVP Scope (Lean Version)

- Auth (Supabase/Firebase)
- Vendor and customer onboarding
- Slot booking system (with calendar logic)
- Booking confirmation view
- Push/email notifications (OneSignal or Firebase)
- No payment integration in MVP
- Simple vendor dashboard (can be embedded web)

4. Tech Stack

Frontend: SwiftUI (iOS) or React Native (cross-platform)

Backend: Supabase or Firebase

Database: PostgreSQL (Supabase) or Firestore (Firebase)

Notifications: Firebase or OneSignal

Maps: Google Maps SDK (V2)

Payments (V2): Razorpay/Stripe

5. Development Timeline (Solo, While Working Full-Time)

Estimated Total: 100-120 hours

Week 1: App planning, DB schema, auth setup

Week 2: Customer app basic flows (browse, book)

Week 3: Vendor service listing and dashboard

Week 4: Slot calendar + booking logic

Week 5: Notifications + testing

Week 6: UI polishing, bug fixes, beta testing

6. Future Add-Ons (Post-MVP)

- Online payments
- Real-time availability sync
- Search, filtering, and map-based discovery
- Admin dashboard
- Analytics for vendors
- User loyalty system

7. Monetization Ideas

- Commission per booking
- Freemium model for vendors (e.g., first 10 bookings free)
- Premium vendor profiles or featured listings
- In-app ad placements for tools/equipment rentals
